Parking lot lighting control panel and enclosure that houses a 12 pole lighting contactor and canopy contactor. Both contactors are controlled by either Photo Control or Timer Control which is easily selected by turning the selector switch to the desired control mode. A Surge Protection Device protects the components in the enclosure from spikes and surges. A cabinet light and receptacle are provided to allow easy viewing of circuit breakers on panelboard and easy plug in of a trouble light for late night troubleshooting. The Photo Control Relay cycles on and off by sensing sunlight during the day to bring light on at night only. The Timer Control Relay cycles on and off based on times programmed into the Electronic Timer unit. This provides backup in the event of vandalism of the Photo Control Sensor or Bad Sensor. Lights can also be manually operated by selecting Hand for Constant ON condition or Off for Constant OFF condition. Models can be equipped with a Cadmium Sulfide Photosensitive Plate that is completely vandal-proof and comes with either a 120 or 240VAC Controller. A simple screw in led light bulb can be housed in the Globe Unit to replace the standard Cfl Bulb to increase light reliability and reduce potential electrical noise that is generated by Cfl Bulbs.
