HHC IS HEXAHYDROCANNABINOL HHC CANNABINOID EFFECTS

The well-known "high" of THC stays pretty much the same when it becomes HHC. Some people that have tried it report a sensory enhancement very similar to the one they get from THC, with tingling in their limbs, visual and hearing alteration.

The psychotropic effects of HHC take a longer time to set on than THC.

On the other hand, these effects last longer when using HHC.

People have said that HHC does not show on a drug test.

The effect of HHC on medical conditions like pain and inflammation is stronger than the not hydrogenated THC.

The same happens with its anti-tumor properties, more effective than the ones from THC.

HHC is not THC and may be legal in your area.
